

7 reasons client use our Videoconferencing Bundle Program

- 1. No upfront capital expense for new videoconferencing equipment** – This is a great program to get the latest videoconferencing equipment without any capital budget requirements.
- 2. No more obsolete or out of date videoconferencing systems** -- Videoconferencing equipment is upgraded on-line automatically. At the end of the contract there is the option for a hardware upgrade.
- 3. No added bandwidth on the network** – The circuit is dedicated to the videoconferencing equipment and requires no bandwidth from your current network.
- 4. No security issues just because there is videoconferencing** – The videoconferencing system has no computer and the circuit is dedicated and not part of the network. Hackers cannot reach the network through the videoconferencing system as it's totally isolated.
- 5. No need to open ports on the firewall leaving the network vulnerable** – The IT team won't worry about opening ports on the firewall to accommodate videoconferencing.
- 6. No need to contact an IT person for help** – A laminated remote schematic is included with every unit with 800 support numbers for both the network and the equipment. Support numbers are also affixed to the remote. The interface is so simple; if you know how to make a cell phone call you can connect a videoconference.
- 7. No more worries connecting** – Managed services are part of the bundle program. Our technical team at J.W. Hornyak Videoconferencing & Telecom constantly monitors the network and the reliability of your videoconferencing system. On the rare occasion if there is a problem, we know about it before you do.
